House Committee on Ways and Means
Subcommittee on Health
Hearing: Health Industry Consolidation

September 9, 2011, 9:30 AM

by Michael G. Bindner

The Center for Fiscal Equity

Chairman Herger and Ranking Member Stark, thank you for the opportunity to submit my comments on this topic. We will leave it to the invited witnesses to take the temperature of the industry on health care consolidation and will focus on possible future sources of health care consolidation and their impact on the cost of private health insurance, Medicare spending, and beneficiary costs.

The key issue for the future of health care consolidation is the impact of pre-existing condition reforms on the market for health insurance. Mandates under the Affordable Care Act (ACA) may be inadequate to keep people from dropping insurance - and will certainly not work if the mandate is rejected altogether for constitutional reasons.

If people start dropping insurance until they get sick – which is rational given the weakness of mandates – then private health insurance will require a bailout into an effective single payer system. The only way to stop this from happening is to enact a subsidized public option for those with pre-existing conditions while repealing mandates and pre-existing condition reforms.

In the event that Congress does nothing and private sector health insurance is lost, the prospects for premium support to replace the current Medicare program is lost as well. Premium support also will not work if the ACA is repealed, since without the ACA, pre-existing condition protections and insurance exchanges eliminate the guarantee to seniors necessary for reform to succeed. Meanwhile, under a public option without pre-existing condition reforms, because seniors would be in the group of those who could not normally get insurance in the private market, the premium support solution would ultimately do nothing to fix Medicare's funding problem.

Resorting to single-payer catastrophic insurance with health savings accounts would not work as advertised, as health care is not a normal good. People will obtain health care upon doctor recommendations, regardless of their ability to pay. Providers will then shoulder the burden of waiting for health savings account balances to accumulate – further encouraging provider consolidation. Existing trends toward provider consolidation will exacerbate these problems, because patients will lack options once they are in a network, giving funders little option other than paying up as demanded.

Shifting to more public funding of health care in response to future events is neither good nor bad. Rather, the success of such funding depends upon its adequacy and its impact on the quality of care – with inadequate funding and quality being related. For example, Medicare provider cuts under current law have been suspended for over a decade, the consequence of which is adequate care. By way of comparison, Medicaid provider cuts have been strictly enforced, which has caused most providers to no longer see Medicaid patients, driving them to hospital emergency rooms and free clinics with long waiting periods to get care.

Ultimately, fixing health care reform will require more funding, probably some kind of employer payroll or net business receipts tax – which would also fund the shortfall in Medicare and Medicaid (and take over most of their public revenue funding). We will now move to an analysis of funding options and their impact on patient care and cost control.

The committee well understands the ins and outs of increasing the payroll tax, so I will confine my remarks to a fuller explanation of Net Business Receipts Taxes (NBRT). Its base is similar to a Value Added Tax (VAT), but not identical.

Unlike a VAT, and NBRT would not be visible on receipts and should not be zero rated at the border – nor should it be applied to imports. While both collect from consumers, the unit of analysis for the NBRT should be the business rather than the transaction. As such, its application should be universal – covering both public companies who currently file business income taxes and private companies who currently file their business expenses on individual returns.

The key difference between the two taxes is that the NBRT should be the vehicle for distributing tax benefits for families, particularly the Child Tax Credit, the Dependent Care Credit and the Health Insurance Exclusion, as well as any recently enacted credits or subsidies under the ACA. In the event the ACA is reformed, any additional subsidies or taxes should be taken against this tax (to pay for a public option or provide for catastrophic care and Health Savings Accounts and/or Flexible Spending Accounts).

If cost savings under an NBRT, allow companies to offer services privately to both employees and retirees in exchange for a substantial tax benefit. Employers who fund catastrophic care would get an even higher benefit, with the proviso that any care so provided be superior to the care available through Medicaid. Making employers responsible for most costs and for all cost savings allows them to use some market power to get lower rates, but no so much that the free market is destroyed. The ability to exercise market power, with a requirement that services provided in lieu of public services be superior, will improve the quality of patient care. To the extent that

This proposal is probably the most promising way to decrease health care costs from their current upward spiral – as employers who would be financially responsible for this care through taxes would have a real incentive to limit spending in a way that individual taxpayers simply do not have the means or incentive to exercise. While not all employers would participate, those who do would dramatically alter the market. In addition, a kind of beneficiary exchange could be established so that participating employers might trade credits for the funding of former employees who retired elsewhere, so that no one must pay unduly for the medical costs of workers who spent the majority of their careers in the service of other employers.

Employer provided health care will also reverse the trend toward market consolidation among providers. The extent to which firms hire doctors as staff and seek provider relationships with providers of hospital and specialty care is the extent to which the forces of consolidation are overcome by buyers with enough market power to insist on alternatives, with better care among the criteria for provider selection.

The NBRT would replace disability insurance, hospital insurance, the corporate income tax, business income taxation through the personal income tax and the mid range of personal income tax collection, effectively lowering personal income taxes by 25% in most brackets. Note that collection of this tax would lead to a reduction of gross wages, but not necessarily net wages – although larger families would receive a large wage bump, while wealthier families and childless families would likely receive a somewhat lower net wage due to loss of some tax subsidies and because reductions in income to make up for an increased tax benefit for families will likely be skewed to higher incomes. For this reason, a higher minimum wage is necessary so that lower wage workers are compensated with more than just their child tax benefits.

The Center calculates an NBRT rate of 27% before offsets for the Child Tax Credit and Health Insurance Exclusion, or 33% after the exclusions are included. This is a “balanced budget” rate. It could be set lower if the spending categories funded receive a supplement from income taxes.

Thank you for the opportunity to address the committee. We are, of course, available for direct testimony or to answer questions by members and staff.
